

HALO IT SERVICES 365

MASTER IMPLEMENTATION SPECIFICATION

FILE 4 OF 5

Integrations Centre, Dev Console, App Builder, Expansion Centre, Marketing & Ads Centre, VoIP Centre, Audit Framework

Version: 1.0

Date: 2026-06-09

Status: Master Requirements Specification

22. INTEGRATIONS CENTRE

Objective

Provide a centralized integration management platform capable of connecting Halo IT Services 365 to external platforms, APIs, cloud services, communication systems, accounting platforms, security platforms, monitoring systems and future technologies.

Integration Categories

Productivity

Support:

- Microsoft 365
 - Google Workspace
 - SharePoint
 - Teams
 - Exchange Online
 - OneDrive
-

Project & Service Platforms

Support:

- Monday.com
 - Jira
 - Freshworks
 - Freshdesk
 - ServiceNow
 - Zendesk
-

Time Tracking

Support:

- Clockify
 - Toggl
 - Harvest
-

Accounting

Support:

- Xero
 - Sage
 - QuickBooks
 - Zoho Books
-

CRM

Support:

- Zoho CRM
 - HubSpot
 - Salesforce
-

Security

Support:

- Mimecast
 - Sophos
 - SentinelOne
 - CrowdStrike
 - Microsoft Defender
-

Cloud Platforms

Support:

- Azure
 - AWS
 - Google Cloud
 - Cloudflare
-

Development Platforms

Support:

- GitHub
 - GitLab
 - Bitbucket
 - Azure DevOps
-

Monitoring Platforms

Support:

- N-Able
 - Datto
 - Lansweeper
 - PRTG
 - Zabbix
-

Backup Platforms

Support:

- Cove
 - Veeam
 - Acronis
 - Azure Backup
-

Learning Platforms

Support:

- Pluralsight
 - Udemy
 - LinkedIn Learning
 - MeasureUp
-

Communication Platforms

Support:

- Slack
 - Teams
 - Discord
-

Integration Methods

API Integration

Secure API authentication.

OAuth Integration

Consent-based integrations.

Credential-Based Integration

Secure credential vault usage.

AI-Assisted Integration

AI assists with:

- Configuration
 - Testing
 - Validation
 - Deployment
-

Integration Lifecycle

States:

- Draft
 - Configuring
 - Testing
 - Active
 - Disabled
 - Archived
-

Approval Requirements

Only Super Admins and Owners may:

- Enable
- Disable
- Approve
- Remove

integrations.

Integration Monitoring

Track:

- Health
 - Errors
 - Usage
 - Performance
 - Security Status
-

Integration Audit Logging

Track:

- Creation
 - Changes
 - Approval
 - Removal
-

23. DEV CONSOLE

Objective

Provide a secure internal development environment for managing Halo IT Services 365.

Development Dashboard

Display:

- Active Branches
 - Active Deployments
 - Build Status
 - Test Results
 - Rollback Availability
-

Source Control

Support:

- GitHub
 - GitLab
 - Azure DevOps
-

Development Operations

Capabilities:

- Code Editing
 - Commit Management
 - Branch Management
 - Pull Requests
 - Merge Requests
-

AI Development Assistant

Capabilities:

- Generate Code
 - Refactor Code
 - Review Code
 - Explain Code
 - Generate Tests
 - Generate Documentation
-

Deployment Management

Support:

- Development
 - Testing
 - Staging
 - Production
-

Rollback System

All deployments must support:

- Automatic Rollback
 - Manual Rollback
-

Deployment Confirmation

After deployment:

User must confirm stability.

If not confirmed within configured period:

System may rollback automatically.

Testing Framework

Support:

- Unit Tests
 - Integration Tests
 - Security Tests
 - UI Tests
-

Development Permissions

Only authorized users may:

- Deploy
 - Modify Code
 - Execute Scripts
-

Terminal Centre

Support:

- Bash
 - PowerShell
 - Node.js
 - Python
 - Linux Shell
-

Command Auditing

All executed commands must be logged.

24. APP BUILDER CENTRE

Objective

Provide Halo IT Services 365 with native application creation capabilities.

App Builder Modes

AI Builder

Build applications from prompts.

Manual Builder

Traditional coding environment.

Supported Outputs

Generate:

- Web Applications

- PWAs
 - Desktop Applications
 - Windows EXE
 - MSI Packages
 - Mobile Applications
 - API Services
-

Upload Existing Projects

Support:

- Folder Uploads
 - File Uploads
 - Repository Imports
-

Build Pipeline

Stages:

- Validation
 - Compilation
 - Security Checks
 - Packaging
 - Signing
-

Digital Signing

Applications must support:

- Halo IT Signing
 - Internal Certificates
 - Trust Validation
-

Security Validation

Before release:

- Vulnerability Scan

- Dependency Scan
 - Code Scan
-

App Deployment

Support:

- Internal Deployment
 - Client Deployment
 - Public Release
-

Build History

Track:

- Builds
 - Releases
 - Versions
-

App Builder Audit Logging

Track all actions.

25. EXPANSION CENTRE

Objective

Provide a centralized feature expansion framework.

Expansion Categories

Support:

- New Modules
- New Integrations
- New AI Functions

- New Security Features
 - New Business Functions
-

AI Expansion Assistant

Capabilities:

- Suggest Features
 - Generate Specifications
 - Generate Code
 - Generate Workflows
-

Expansion Requests

Users may submit:

- New Features
 - Enhancements
 - Improvements
-

Expansion Lifecycle

States:

- Proposed
 - Approved
 - In Development
 - Testing
 - Released
-

Feature Marketplace

Internal repository of:

- Modules
 - Integrations
 - Templates
-

Expansion Audit Logging

Track:

- Requests
 - Approvals
 - Releases
-

26. MARKETING & ADS CENTRE

Objective

Provide centralized marketing and advertising management.

Campaign Management

Support:

- Digital Campaigns
 - Social Campaigns
 - Email Campaigns
 - Product Campaigns
-

Advertising Platforms

Support:

- Google Ads
 - Facebook
 - Instagram
 - LinkedIn
 - X
 - TikTok
-

Content Management

Support:

- Images
 - Videos
 - Documents
 - Campaign Assets
-

AI Marketing Assistant

Capabilities:

- Generate Ads
 - Generate Content
 - Generate Campaign Ideas
 - Analyze Performance
-

Promotion Scheduling

Support:

- Start Dates
 - End Dates
 - Recurring Campaigns
-

Passive Revenue Platform

Support:

- Third Party Advertising
 - Sponsored Content
 - Marketing Services
-

Graphic Design Tools

Support:

- Banner Creation
 - Social Posts
 - Marketing Assets
-

Marketing Analytics

Track:

- Clicks
 - Leads
 - Conversions
 - Revenue
-

Marketing Audit Logging

Track all actions.

27. VOIP CENTRE

Objective

Provide communication management capabilities.

VoIP Features

Support:

- Internal Calling
 - External Calling
 - SIP Trunks
 - Call Routing
 - Extensions
-

Call Management

Support:

- Call Queues
 - Ring Groups
 - Voicemail
 - IVR
-

Integrations

Support:

- Microsoft Teams
 - 3CX
 - FreePBX
 - Yeastar
 - Asterisk
-

Call Recording

Support:

- Recording
 - Storage
 - Retention Policies
-

Contact Management

Support:

- Internal Contacts
 - Client Contacts
 - Vendor Contacts
-

AI Voice Features

Capabilities:

- Call Summaries
 - Call Notes
 - Call Analysis
-

VoIP Audit Logging

Track:

- Calls
 - Changes
 - Recordings
-

28. GLOBAL AUDIT FRAMEWORK

Objective

Provide complete accountability across the entire Halo IT Services 365 platform.

Audit Categories

Authentication

Track:

- Login
 - Logout
 - MFA
 - Password Resets
-

Tickets

Track:

- Creation
 - Assignment
 - Updates
 - Closures
-

Monitoring

Track:

- Alerts
 - Device Events
 - Health Changes
-

Security

Track:

- Threats
 - Access Changes
 - Security Events
-

Accounting

Track:

- Invoices
 - Quotes
 - Payments
-

HR

Track:

- Reviews
- Leave
- Promotions

Development

Track:

- Code Changes
- Deployments
- Rollbacks

Integrations

Track:

- Configuration
- Approval
- Removal

AI

Track:

- Requests
- Actions
- Model Usage
- AI Generated Changes

Audit Storage

Requirements:

- Tamper Resistant
 - Searchable
 - Filterable
 - Exportable
-

Audit Search

Support:

- User
 - Date
 - Module
 - Action
 - Severity
-

Audit Retention

Configurable retention periods.

Audit Reporting

Generate:

- Compliance Reports
 - Security Reports
 - Management Reports
-

Compliance Objectives

Support future alignment with:

- POPIA
 - GDPR
 - ISO 27001
 - ITIL
 - Industry Best Practices
-

GLOBAL NOTIFICATION FRAMEWORK

All modules must support:

- Email Notifications

- In-App Notifications
 - Push Notifications
 - SMS Notifications (Optional)
 - Teams Notifications
 - Slack Notifications
-

GLOBAL AI ASSISTANT BUTTON

Every major centre shall include:

Ask Halo AI

The AI assistant must be context aware and capable of assisting users within the current module they are operating in.

Examples:

- Dashboard AI
- Ticket AI
- Security AI
- Accounting AI
- Learning AI
- Dev AI

Each AI assistant must inherit permissions from the current user.
